

Hello

I'm Christian Prado - [Linkedin](#) | [GitHub](#) | [Portfolio](#)

Orange County, CA | (714) 721-3467 | Chris.a.prado@gmail.com

Skills/Frameworks/Other

JavaScript(ES6/JCX), HTML5, CSS(LESS & SASS/SCSS), Python, Ruby, MySQL, PHP.

React, HyperApp, Gulp, Webpack, Babel, WordPress, Node.js, Vue.js, jQuery, Rails, Git.

Projects

Mastro's Steak Restaurant - *Single page application* - [See App](#)

- Built with HyperApp because of its small 1kb library and support for ES6!
- Single Page Application decided to use SASS for the variables and custom CSS framework I built based on Bulma's grid system.
- I built this application to get a grasp of the HyperApp framework. This was my first application with HyperApp similar to React decided to test out the 1kb library and use the very easy to manage states.

MantisCSS - *CSS Framework* - [View Source](#)

- Decided I needed my own framework as I love to customize Bootstrap and Bulma heavily.
- I used LESS for crafting the framework and maintaining it.
- Built off the features I love from Bulma, Bootstrap, and Foundation with a personal twist. Grids responds well with different view ports as well as custom color swatches and CSS cards.

AlgoWiki - *Open Source collaboration project* - [See Wiki](#)

- Maintain, Review pull request and update content.
- AlgoWiki is for junior or senior level developers that are curious about different programming algorithms, lectures, fundamentals or refresher courses.
- All media, documentation and lectures are open source free public domain.

CTRL+J - *Single page application* - [See App](#)

- Application built with React, components are the future. Everything is organised into reusable components.
- Ctrl+J can scale very well if I need it to. React is extremely efficient for my needs.
- I built this web app to both combine the beautiful colors and React, Since react has a rep for having a learning curve I often use react for even simple web projects.
